+Great minimalistic arcade bullet hell, 95V100.

weapons: regular pellet gun, bombs, and boost.

Options menu is lacking a way to remap keyboard controls, but the default controls arent bad.

If you die its your own fault, just the way i personally like it.

++The skillceiling is also higher than snoop dogg. Anyone who knows me can tell you I really dont do endless shooters. This might have something to do with the fact I\u2019m not very good at them but lets just skip past that minor point. Fact is, I tend to avoid at all costs. However, I may have just found an exception to this unspoken rule I live by.

Browsing through my steam library and trying to organise everything when I come across \u2018Polychromatic\u2019 - a game I\u2019ve never played and don\u2019t actually know anything about ... hell lets play it and see what we have here. Much to my disappointment, I realised pretty much upon opening what it was and swiftly sought out the exit game button. Then I stopped ... I dont know why but I did. A small niggling urge inside me to try this game out. So I did.

This has got to be by far the smoothest endless shooter I have ever played. Easy controls using a game pad and dare I say it, almost enjoyable. A simple yet well made design that doesn\u2019t hurt your brain when your trying to keep track of your little attack dude and three modes to suit your preference of play style. If your after killing as much as you can and don\u2019t want to worry about how many lives you have, \u2018Timed\u2019 is the way to go. If you want a bit more of a challenge and actually want to panic about losing lives then hit that \u2018Endless\u2019 mode. Which of course leaves \u2018One-life\u2019 which pretty much speaks for itself - hardcore only go near if your good at this stuff sorta mode. A cool feature of this particular shooter is that unlike alot of others, each of those little demon shapes trying to kill you has its own pattern. The further you get, the more you get to figure out - oh and the more you die.

So i\u2019m clearly not very good at this but I dare say this is one of the few shooters I will actually play more than once and actually kind of enjoyed. Worth the \u00a31.99? In my opinion ... yeah i\u2019d say it is. Well done Brushfire Games, you\u2019ve succeeded where most have failed - Giving me an endless shooter I\u2019m happy to pay for and kill some time on!. Simple yet elegant twin-stick shooter offering you a satisfying frantic arcade experience for a small price.. Sweeeeeeeeeet game. Beautifully smooth and fluid graphics. Enjoyable for a quick play but just seems like I keep wishing there was a little more. Feels like a minimalist interpretation of 'Waves' which has more variety and intensity.

Hope to see updates with additional modes or arenas.
